Abstract. *In article features of complex development of the agrarian market are shined. Questions of perfection of economic, organizational, legal, social and ecological directions of proportional development of the markets of agricultural production, agrarian resources and agrarian services are considered. By us are considered the market interrelation of a commodity economy in the course of manufacture, distribution and an exchange of production, resources and services of managing subjects in agrarian branch.*

Keywords: *the agrarian market, the market of agricultural production, the market of agrarian resources, the market of agrarian services, a competition, requirement, the price, profit.*

In agrarian reforms spent to Republic of Uzbekistan the great attention is given to development of the markets of agricultural production, agrosources and the agrarian services functioning as a part of the agrarian markets, and expansion of principles of the free market. In the conditions of development of market relations in agriculture (agrarian and industrial complex) of republic transition to a new step of development of the markets of agricultural production, agrarian resources and agrarian services has caused working out and introduction in practice of the important legal and economic mechanisms directed on support effective functioning of all branches of agrarian sphere. In particular in the agricultural enterprises of various forms of managing, are important finishing of agricultural products made by them to level of the world standards, increase of volume of export of production, satisfaction of demand on qualitative resources and the services necessary for production, increase of level of services is. The market is not only the relation connected with the purchase and sale of the goods, but also actively operates processes of manufacture, distribution, an exchange and consumption. It in effect is a bit wider, than relations of an exchange and turn to economic relations between managing subjects in the course of manufacture, distribution and production exchange. As the major features of communications of a commodity economy it is possible will allocate the free and favourable arrangement of the buyer and the seller, an equivalent exchange, a free and independent choice of cooperation, presence of the competitive environment. These features make also a basis of free market relations. The market in all countries is regulated by the state in certain parities as the market economy along with that is economically very effective system, is considered socially inefficient for members of a society. In agrarian branch of Republic of Uzbekistan and a level of development of economic relations, it is possible to notice that the pure free market economy for practice is "abstract" concept. The market economy functions in close interrelation with social in society social and economic system, and it is difficult for estimating in the form of the form any defined socially - economic system. For development of the markets of agricultural production, agrarian resources and agrarian services it is necessary to improve this sphere, thus paying attention to following aspects.

- Perfection of system of realisation of agricultural and processed production and a primary establishment of the prices;
- Allocation of grants and grants from the state budget to manufacturers of agricultural production, subjects' agrarian, both resource maintenance and service functioning in regions with heavy agricultural conditions;
- Granting of preferential intermediate terms both long-term credits and introduction of preferential taxes to the enterprises is material - technical supply and service services;
- Maintenance of proportional rates of increase of the prices for agricultural production and an industrial output, and strengthening of a role of the state in this area;
- Creation of the favorable environment for attraction of the state and private investments to development of the enterprises of agrarian sphere;

- Working out and introduction of a complex of economic measures and actions for stimulation of attraction of internal and external investments to development of the enterprises of system of resource maintenance and service in agriculture;
- Acceleration of innovative processes in system of production, resource maintenance and service services;
- Wide introduction of a special government program on support of introduction of innovations in agriculture;
- Working out and introduction of the mechanism of motivation of workers of agrarian and industrial complex in the end results for manufacturers of agricultural production;

It is expedient to expand an organizational direction of development of the markets of agricultural production which includes:

- Perfection of system of standardization and certification of agricultural products with the account of world practice;
- Improvement of professional skill of the working enterprises in agrarian and industrial complex sphere;
- Formation of the healthy competitive environment in agrarian and industrial complex: timely deliveries qualitative it is material - technical resources and services to the agricultural enterprises;
- Improvement of seed-growing, selection and breeding works, perfection of system of supply on these questions, the state support of development of the economy specialising in the given direction;
- Development of processes of integration and cooperation in agrarian sphere in agricultural production directions (fruit growing, vegetable growing, animal industries);
- The organisation of small enterprises on supply, service, manufacture, processing and production realisation, and also the co-operative societies in a complex covering these directions and rendering by it of comprehensive support.

For development of the markets of agricultural production, agrarian resources and resource services expediently:

- To improve the laws regulating activity of the enterprises of manufacture of agricultural production, resource maintenance and service;
- Financial support of subjects of supply it is material - technical resources and service in agrarian and industrial complex.

For the further development of the markets of agricultural production, agrarian resources and resource services expediently:

- To raise an occupation level by expansion of agrarian resources and agrarian services at the enterprises of the markets of agricultural production;
- Wide application of achievements of science and technology with a view of increase in incomes of workers in agrarian sphere;
- Perfection of actions for creation of favorable working conditions for workers of sphere financially - technical maintenance and service in agriculture, their social protection.

Wide introduction of mechanisms of ecological control of activity of the enterprises in processes of manufacture of agricultural products, resource maintenance in agrarian sector and service is necessary. With maintenance increase in soil of harmful chemical elements at processing by its mineral fertilizers and pesticides, their transition in sewage and drawing of harm to environment, transition of a part of harmful elements in air, the increasing increase in the maintenance of harmful chemicals in products made by agriculture danger of drawing of harm to health of the person raises. For introduction of the mechanism of maintenance of ecological equilibrium entering of respective alterations into the current legislation, working out of new laws, revised existing statutory acts is necessary. Rising on new level of carried out reforms in agrarian sphere of the country and through this expansion of possibilities in the international market is one of actual problems of today. Realization of the above-stated measures and actions will lead to mutual proportional development of the market of agricultural production, agrarian resources and the agrarian services which are a part of the agrarian market. And it, in turn will lead to increase in volume of agricultural production and increase of a standard of living of the population.
